

Beaver Benefits

The North American beaver, *Castor canadensis*, build dams and wetlands that are among the most biologically productive ecosystems in the world, comparable to coral reefs and rain forests.ⁱ Beaver benefits include: ⁱⁱ

Create diverse habitats and ecosystems ⁱⁱⁱ

Increase biodiversity ^{iv}

Promote salmon/trout recovery ^v

Regulate stream flows ^{vi}

Improve water quality, acts as the “Earth’s Kidneys” ^{vii}

Replenish drinking water aquifers ^{viii}

Stabilize the water table ^{ix}

Repair eroded stream channels ^x

Restore watershed health ^{xi}

Plus, beavers provide all these ecological restoration services for free, saving us millions of dollars!

Despite these valuable ecological services, beavers sometimes cause landowners significant damage. Fortunately though, cost-effective, long-term, environmentally-friendly and humane options exist to resolve most conflicts. Beaver trapping is legal, but to retain all the beaver benefits it should be a last resort.

Effective Nonlethal Tools Exist for Beaver Problems ^{xii}

In the vast majority of cases we can coexist with beavers, protect human property and interests, save money, and better steward the natural environment that we and all living things rely upon.
