Since 1998 Mike Callahan and Beaver Solutions LLC have resolved over 1,750 beaver-human flooding conflicts with innovative water control devices. These flow devices are so successful that we can offer a money-back “Worry-Free Guarantee”.

Beaver Solutions serves southern New England, and its clients include state and local highway departments and agencies, public utilities, Land Trusts, environmental groups, businesses, homeowners, and any other property owner with a beaver problem.

Our site assessment will determine if a long-term, cost-effective solution with a flow device is feasible for your beaver problem. Although, we also offer beaver trapping in Massachusetts where flow devices are not feasible.
